Executive Summary

JCT Drywall has the right local SEO structure in place — a sitemap with targeted service-area pages for Clearwater, St. Pete, and Largo, crawl configuration in robots.txt, and a dedicated FAQ page. The critical problem is that 100% of the site's content is rendered by JavaScript. Every page — including the homepage, FAQ, and all three service pages — returns an identical bare HTML shell with no body text, no headings, no schema markup, and no contact information. To Google's crawler on a first pass, and to every AI engine that doesn't execute JavaScript (Perplexity, ChatGPT, most AI scrapers), the site is essentially blank. Fixing this one issue — moving to server-side rendering or static HTML generation — would unlock the value of all the other structural work already done.

Dimension	Score	Status	Key Takeaway
SEO	3/10	Needs Work	JS-only rendering means crawlers and AI engines see no content; duplicate titles on all pages
GEO	2/10	Needs Work	No crawlable E-E-A-T content, no schema, no entity signals accessible to AI engines
AEO	2/10	Needs Work	FAQ page exists but content is invisible to crawlers; no FAQ schema, no voice search readiness
Combined	7/30		

Pages Audited

URL	Page Type	Notes
https://www.jctdrywall.com/	Homepage	Bare HTML shell — no body content rendered server-side
https://www.jctdrywall.com/faq	FAQ	In sitemap; returns same empty shell as homepage
https://www.jctdrywall.com/drywall-repair-clearwater	Service Area	Same bare shell; no location-specific content visible to crawlers

URL	Page Type	Notes
https://www.jctdrywall.com/drywall-repair-st-petersburg	Service Area	Same bare shell
https://www.jctdrywall.com/drywall-repair-largo	Service Area	Same bare shell
robots.txt	Config	PetalBot blocked; AhrefsBot/dotbot crawl-delay 10s; sitemap declared
sitemap.xml	Sitemap	5 URLs; correct structure; all 2026-04-29 lastmod

SEO Analysis — Score: 3/10 (Needs Work)

Technical On-Page

Signal	Finding	Status
Title Tag	Same title on all 5 pages: "Drywall Contractor in Pinellas County, FL JCT Drywall" — 54 chars, keyword present, but duplicate across every URL including the three separate service-area pages	Needs Attention
Meta Description	Not present in static HTML on any page — may be JS-injected but invisible to crawlers that do not execute JavaScript	Missing
H1	No H1 found in static HTML on any page — content is entirely JavaScript-rendered	Missing
Heading Hierarchy	No headings of any level accessible in server-rendered HTML across all 5 pages	Missing
Canonical Tag	Not found in static HTML — cannot confirm self-referencing canonicals are present	Missing
Robots Meta	No robots meta tag found in static HTML — page appears indexable by default but cannot be confirmed	Needs Attention
Viewport Meta	Cannot confirm from available static HTML — likely JS-injected	Needs Attention
Image Alt Text	No images accessible in static HTML — cannot assess	Missing

Signal	Finding	Status
Internal Links	No body content means no internal links between pages are visible to crawlers	Missing
Open Graph Tags	No OG tags found in static HTML — social sharing will show no title, description, or image	Missing
JavaScript Rendering	Critical: 100% of content is client-side rendered. Server response body is empty. Google may index after JS execution, but AI engines and many crawlers will never see the content.	Missing

Content Quality

Signal	Finding	Status
Word Count	Zero crawlable words on any page — all content is behind JavaScript rendering	Missing
Keyword Coverage	Cannot assess — content not accessible to crawlers or AI engines	Missing
Content Freshness	No dates, publication signals, or freshness indicators in static HTML	Missing
Readability	Cannot assess — no accessible content	Missing
Service Area Targeting	The sitemap correctly creates separate URLs for Clearwater, St. Pete, and Largo — strong local intent structure that JS rendering is currently blocking	Needs Attention

Structured Data

Signal	Finding	Status
Schema Markup	No JSON-LD or microdata found in static HTML on any page	Missing
LocalBusiness Schema	Missing — critical for a local contractor to declare NAP, service area, and business type	Missing
FAQPage Schema	FAQ page exists in sitemap but no schema is accessible to crawlers	Missing

Signal	Finding	Status
BreadcrumbList	Not present	Missing
robots.txt Config	Correctly blocks PetalBot (a scraper bot), sets crawl delay for AhrefsBot and dotbot — good hygiene	Good

GEO Analysis — Score: 2/10 (Needs Work)

E-E-A-T Assessment

Signal	Finding	Status
Named Owner / Team	No owner name, credentials, or team information found in any crawlable content	Missing
About Page	No /about page in sitemap or discoverable via static HTML	Missing
Contact Information	No phone number, email, or address found in static HTML — NAP data invisible to AI engines	Missing
Testimonials / Reviews	No social proof visible in static HTML — the Shark Branding Solutions testimonial (Jonathan Tuttle) exists but is on an external site, not on jctdrywall.com itself	Missing
Awards / Certifications	None found	Missing
Organization Schema	No Organization or LocalBusiness schema declaring the entity — AI engines have no structured anchor for the brand	Missing

Content for AI Synthesis

Signal	Finding	Status
Factual Density	Zero crawlable facts — years in business, number of projects, service radius, materials used, pricing range — none accessible to AI engines	Missing
Clear Claims	No value proposition or differentiator visible in static HTML	Missing

Signal	Finding	Status
Source Citations	Not applicable — no content accessible	Missing
Entity Clarity	Business name "JCT Drywall" appears in the title tag only — no description, no location, no service details crawlable	Needs Attention
Unique Content	Cannot assess — no content visible to crawlers or AI engines	Missing

Technical GEO

Signal	Finding	Status
HTTPS	Site uses HTTPS (www.jctdrywall.com) — positive trust signal	Good
Crawlability	robots.txt allows all major bots. However, JS-only rendering effectively blocks AI crawlers that do not execute JavaScript (Perplexity, ChatGPT, Gemini crawler, etc.)	Needs Attention
SameAs / Social Links	No social profile links found in crawlable HTML — entity graph weak	Missing
Brand Entity Links	No sameAs declarations — AI engines cannot connect jctdrywall.com to any social or directory profiles	Missing

AEO Analysis — Score: 2/10 (Needs Work)

Featured Snippet Eligibility

Signal	Finding	Status
Direct Answer Paragraphs	No crawlable paragraphs of any kind	Missing
Definition Patterns	No "JCT Drywall is..." definitional sentence accessible	Missing
List Content	No bulleted or numbered lists in static HTML	Missing
Comparison Tables	None accessible	Missing

Signal	Finding	Status
Question-Phrased Headings	None — no headings of any kind in static HTML	Missing

Structured Answer Formats

Signal	Finding	Status
FAQ Schema	FAQ page exists at /faq but zero FAQ schema is present in accessible HTML — the page content is invisible to search and AI engines	Missing
HowTo Schema	Not present	Missing
Speakable Schema	Not present	Missing
FAQ Content Quality	Cannot assess — content not accessible; but the existence of the /faq URL is a positive signal once rendering is fixed	Needs Attention

Voice Search Readiness

Signal	Finding	Status
Local NAP Signals	No Name/Address/Phone data in crawlable HTML — voice responses for "drywall repair near me" cannot be populated from this site	Missing
Conversational Language	Cannot assess — no content accessible	Missing
Long-Tail Question Coverage	The /faq page suggests intent to cover questions but content is not accessible	Needs Attention
LocalBusiness Schema for Voice	Not present — voice assistants rely heavily on LocalBusiness schema to identify and recommend local contractors	Missing

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
 Critical	Fix JavaScript rendering — implement server-side rendering (SSR) or static site generation so all page content is present in the HTML response before JavaScript executes. This is the single change that unblocks everything else.	SEO / GEO / AEO	High (dev work)	Critical — without this, no other optimization will be seen by crawlers or AI engines
 Critical	Add LocalBusiness schema with full NAP — business name, phone, address, service area (Clearwater, St. Pete, Largo, Pinellas County), business type (DrywallContractor), and URL. This is the single highest-value schema for a local contractor.	GEO / AEO	Medium (2 hrs)	Critical — required for local search, Google Maps signals, and AI recommendation engines
 High	Give each service-area page a unique title and H1 — e.g. "Drywall Repair in Clearwater, FL JCT Drywall" instead of the same generic title on all pages. Each page should target its specific city.	SEO	Low (30 min)	High — required for local pack rankings in each target city
 High	Add meta descriptions to all pages — unique, 150-160 chars, containing city name and primary service. Currently absent from all static HTML.	SEO	Low (30 min)	High — meta descriptions are the primary click signal in search results
 High	Add FAQPage schema to /faq — once JS rendering is fixed, mark up FAQ questions and answers with FAQPage JSON-LD. Given the FAQ page already exists in the sitemap, this is a clear quick win for featured snippets and People Also Ask.	AEO	Medium (1 hr)	High — direct path to rich results for drywall repair questions
 Medium	Build an About page with owner name, years in business, license number (if applicable), and service area. Add Person or employee schema. This is the key E-E-A-T gap — AI engines have no basis to identify who runs the business.	GEO	Medium (half day)	High long-term — trust signals for AI recommendations and local search authority

Priority	Issue	Dimension	Effort	Impact
 Medium	Add Open Graph tags (og:title, og:description, og:image) to all pages — currently absent. Required for social sharing and some AI engine crawlers that rely on OG data for content signals.	SEO	Low (30 min)	Medium — enables social sharing and improves AI crawler signal quality
 Quick Win	Add visible phone number and contact info to each service-area page in static HTML — not just a JS-loaded contact form. Even a plain tel: link in the footer HTML gives crawlers and AI engines the NAP data they need.	GEO / AEO	Low (15 min)	Medium-High — NAP in static HTML is a basic local SEO requirement

What's Working Well

Well-structured sitemap with local intent targeting

The sitemap correctly creates separate URLs for three service cities (Clearwater, St. Pete, Largo) with appropriate priority values (0.9) — exactly the right structure for local SEO. Once JS rendering is fixed, these pages are set up to rank in each city individually.

robots.txt is correctly configured

PetalBot is blocked (a content scraper with no SEO value), crawl delays are set for resource-intensive bots, and the sitemap URL is declared. This shows deliberate technical SEO thinking.

HTTPS enabled

The site serves over HTTPS — a baseline trust signal for both Google and AI engines.

FAQ page exists in the sitemap

A dedicated /faq page with 0.8 priority is already mapped in the sitemap. Once content is crawlable and FAQPage schema is added, this page is positioned to win featured snippets and People Also Ask placements for drywall repair questions in the Tampa Bay area.
